## 1.1 Symbols used

- Instruction
- > Reaction, result
- [...] Designation of keys, buttons or indications
- Cross-reference
-  Important note  
Non-compliance may result in malfunction or interference.
-  Information  
Supplementary note

UK

### **⚠ WARNING**

Warning of serious personal injury.  
Death or serious irreversible injuries may result.

### **⚠ CAUTION**

Warning of personal injury.  
Slight reversible injuries may result.

### **NOTE**

Warning of damage to property.

## 2 Safety instructions

This description is part of the unit. It contains texts and drawings concerning the correct handling of the module and must be read before installation or use.

Observe the information of the description. Non-observance of the notes, operation which is not in accordance with use as prescribed below, wrong installation or handling can result in serious harm concerning the safety of persons and plant.

The instructions are for authorised persons according to the EMC and low voltage guidelines. The unit must be installed and commissioned by a skilled electrician (programmer or service technician). The device may only be installed, connected and commissioned by qualified personnel.

Disconnect the device externally before doing any work on it. If necessary, also disconnect separately supplied output load circuits.

If the unit is not supplied by the mobile on-board system (12/24 V battery operation) it must be ensured that the external voltage is generated and supplied according to the criteria for safety extra-low voltage (SELV) as this is supplied without further measures to the connected controller, the sensors, and the actuators.

The wiring of all signals in connection with the SELV circuit of the unit must also comply with the SELV criteria (safe extra-low voltage, safe electrical separation from other electric circuits).

If the supplied SELV voltage has an external connection to ground (SELV becomes PELV) the responsibility lies with the user and the respective national regulations for installation must be complied with. All statements in these operating instructions refer to the unit the SELV voltage of which is not grounded.

The terminals may only be supplied with the signals indicated in the technical data or on the unit label and only the approved accessories of ifm electronic gmbh may be connected.

The unit can be operated within a wide temperature range according to the technical specification indicated below. Due to the additional self-heating the housing walls can have high perceptible temperatures when touched in hot environments.

In case of malfunctions or uncertainties please contact the manufacturer.

Tampering with the unit can lead to considerable risks for the safety of persons and plant. It is not permitted and leads to the exclusion of any liability and warranty claims.

### 3 Functions and features

The device enables decentralised evaluation of sensor signals and decentralised triggering of actuators and proportional valves.

#### **⚠ WARNING**

The device is not approved for safety tasks with respect to the protection of persons.

UK

### 4 Function

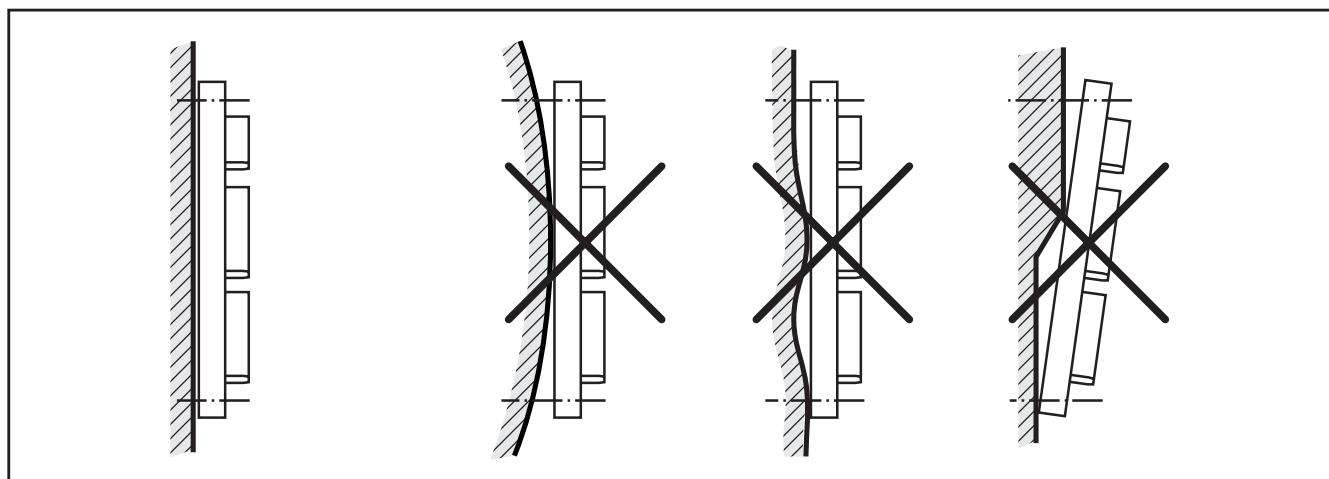

- The module supports binary/analogue inputs/outputs and is therefore classified in the device class "I/O module" to CiA DS 401.
- As regards the input/output functions, the device can be configured and it supports the following functions:
  - analogue inputs  
(0...10/32 V, 0...20 mA, ratiometric, binary and binary with diagnosis)
  - binary inputs
  - frequency inputs
  - binary outputs
  - PWM outputs 0,1...2 A
- There are 1 server SDO and 4 default PDOs according to CiA DS 401. The PDO mapping can be changed (dynamic PDO mapping).  
The default identifiers are assigned according to the "predefined connection set".
- The COB IDs of the PDOs as well as the transmission type (synch/asynch) of the individual PDOs can be configured.
- The device expects a synch object. The CAN identifier of the synch object can be configured.
- The device supports "node guarding" and "heartbeat". The "guard time", the "life time factor" and the "heartbeat time" can be configured.
- The device generates an emergency object. The COB ID of the EMCY object can be configured.
- The device stores the last error. The error code of the corresponding emergency object is stored.
- The device supports a reset function, i.e. the assignment of the parameters to the factory default settings on request.  
Factory default settings (→ 8.3 Communication profiles; Idx 1000 to 1FFF) and (→ 8.4 Manufacturer-specific profiles; Idx 2000 to 5FFF)

## 5 Mounting

### 5.1 Mounting location

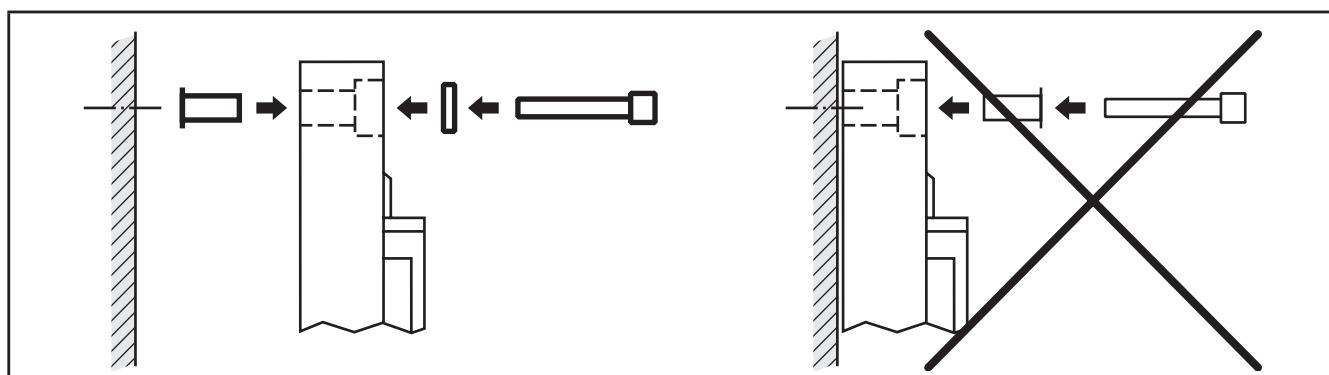

The device is to be mounted in a dry and enclosed environment (e.g. control panel of the driver's cab, separate control boxes, etc.).

The housing must not be exposed to any torsion forces or mechanical stress.

### 5.2 Fixing

Insert the enclosed tubular rivets from the back of the module in the 4 fixing holes.

- ▶ Fix the module using 4 washers and screws.
- ▶ Tighten the screws alternately crosswise.

Tightening torque: 1.5 Nm

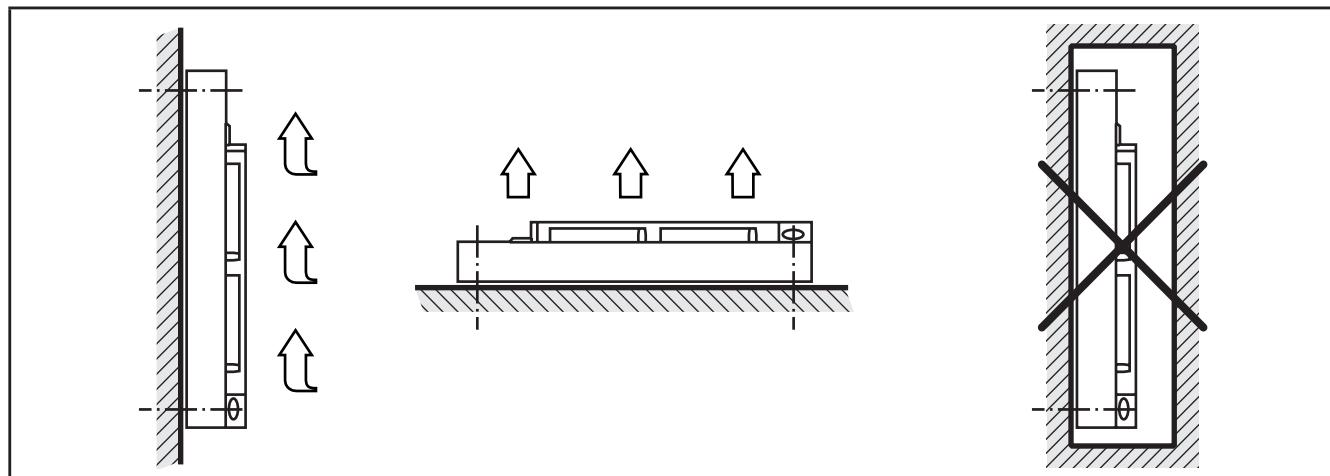

Mounting position: any

Hole dimensions: see back of the module or → 9 Technical data.

Screws to be used (M4 x L), e.g.:	Standard
Cylinder screws with hexagon socket	DIN 912
Cylinder screws with hexagon socket and low head	DIN 7984

## 5.3 Cooling

- As the internal heating of the electronics is conducted away via the housing, ensure sufficient heat dissipation.

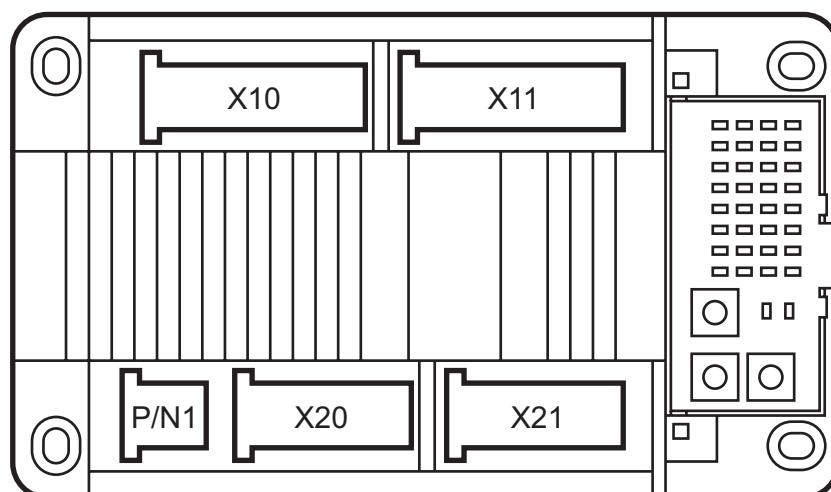

UK

## 6 Electrical connection

### 6.1 Connectors

The supply cables, interfaces and inputs/outputs are connected via AMP crimp connectors on the front of the unit.

Plug	Connection	Number of poles
P/N1	supply, CAN interfaces	6
X10	inputs 01...08 (digital)	18
X11	inputs 09...12 (digital), 01...04 (analogue)	18
X20	outputs 01...08 (digital), 01...04 (PWM)	14
X21	outputs 09...16 (digital)	14

Pin connection → 9 Technische Daten 9 Technical data

- Close unused connectors with unconnected sockets.

Information about the available connector accessories at: [www.ifm.com](http://www.ifm.com)

## 6.2 Fuses

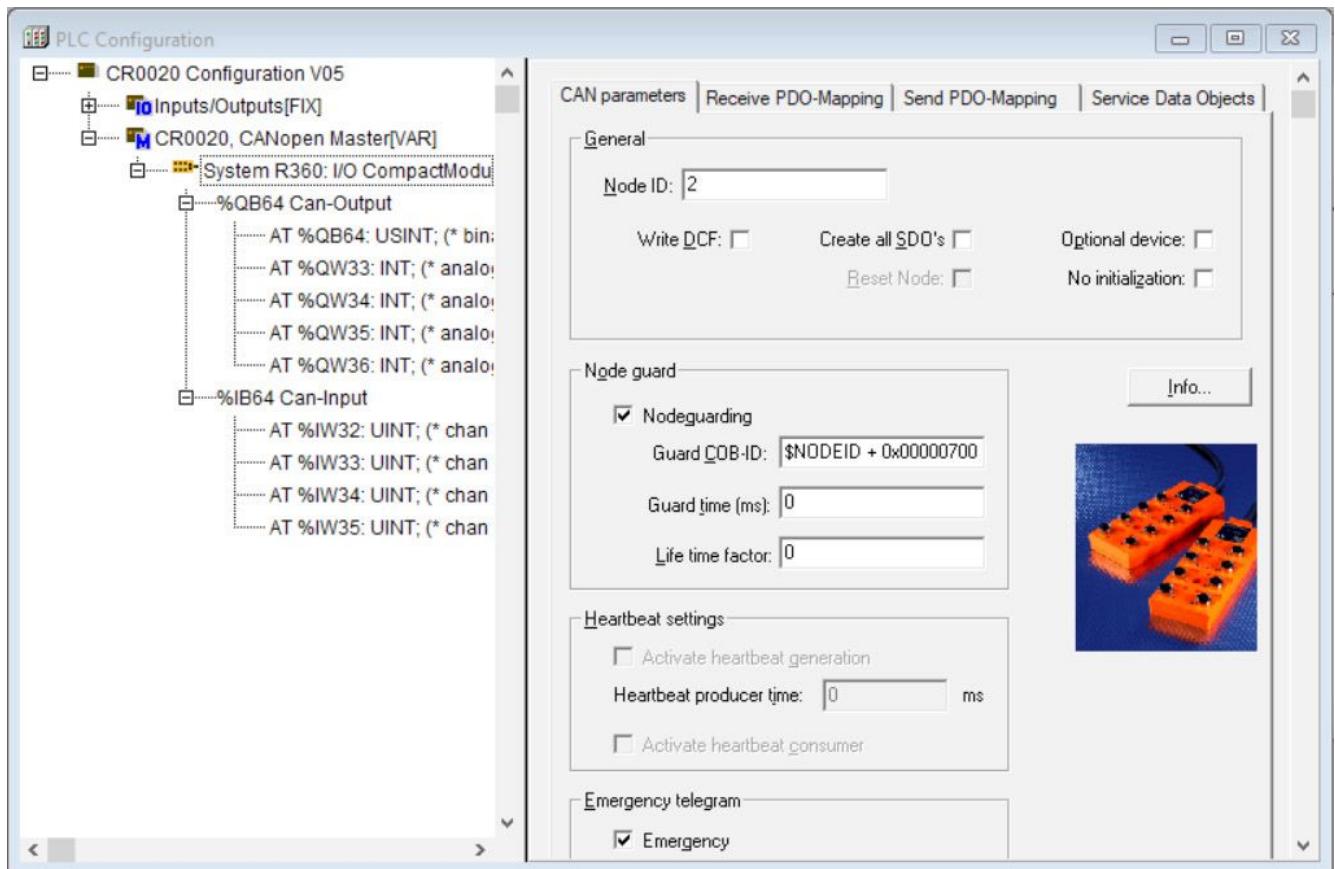

To protect the whole system (wiring and module) the individual electric circuits must be protected.

Designation	Potential	Plug:Pin	Fuse
Supply voltage module	VBB <sub>S</sub>	P/N1:01	2 A
Supply voltage outputs (group 1)	VBB <sub>O 01</sub>	X20:07	20 A
Supply voltage outputs (group 2)	VBB <sub>O 02</sub>	X21:07	20 A

## 7 Set-up

### 7.1 PLC configuration in CODESYS 2.3

Parameter setting of the device functions and of the CAN interface is directly done from the application programmed with CODESYS 2.3. To do so, the „Electronic Data Sheet“ (EDS) is integrated via the CODESYS PLC configuration.

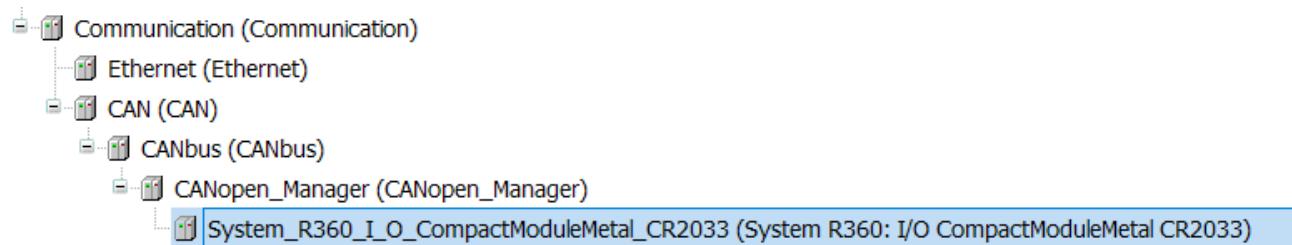

CODESYS dialogue „PLC configuration“ (example)

For a description of the setting and application of the „PLC configuration“ dialogue see the CODESY manual and the CODESYS online help.

## 7.2 PLC configuration in CODESYS 3.5

The „Electronic Data Sheet“ (EDS) is installed in the [Device Repository]. Proceed as follows in the main menu:

- ▶ Click on [Tools] / [Device Repository].
- ▶ Select [Fieldbuses] / [CiA CANopen] / [CiA Remote Device] and click on [Install].
- ▶ Select EDS file and click on [Open].
- > In CODESYS 3.5 the devices are integrated as CiA remote devices in the device tree under a [CANopen\_Manager] element.

The CANopen communication is configured via the CODESYS configuration editor.

### 7.2.1 Heartbeat configuration

The function [Reset Node] must be activated on the tab [General] so that the device applies the parameters set for heartbeat monitoring of the CANopen Manager.

The screenshot shows the configuration dialog for the CANopen Manager. The left sidebar lists tabs: General, PDOs, SDOs, CANopen I/O Mapping, Status, and Information. The General tab is active.

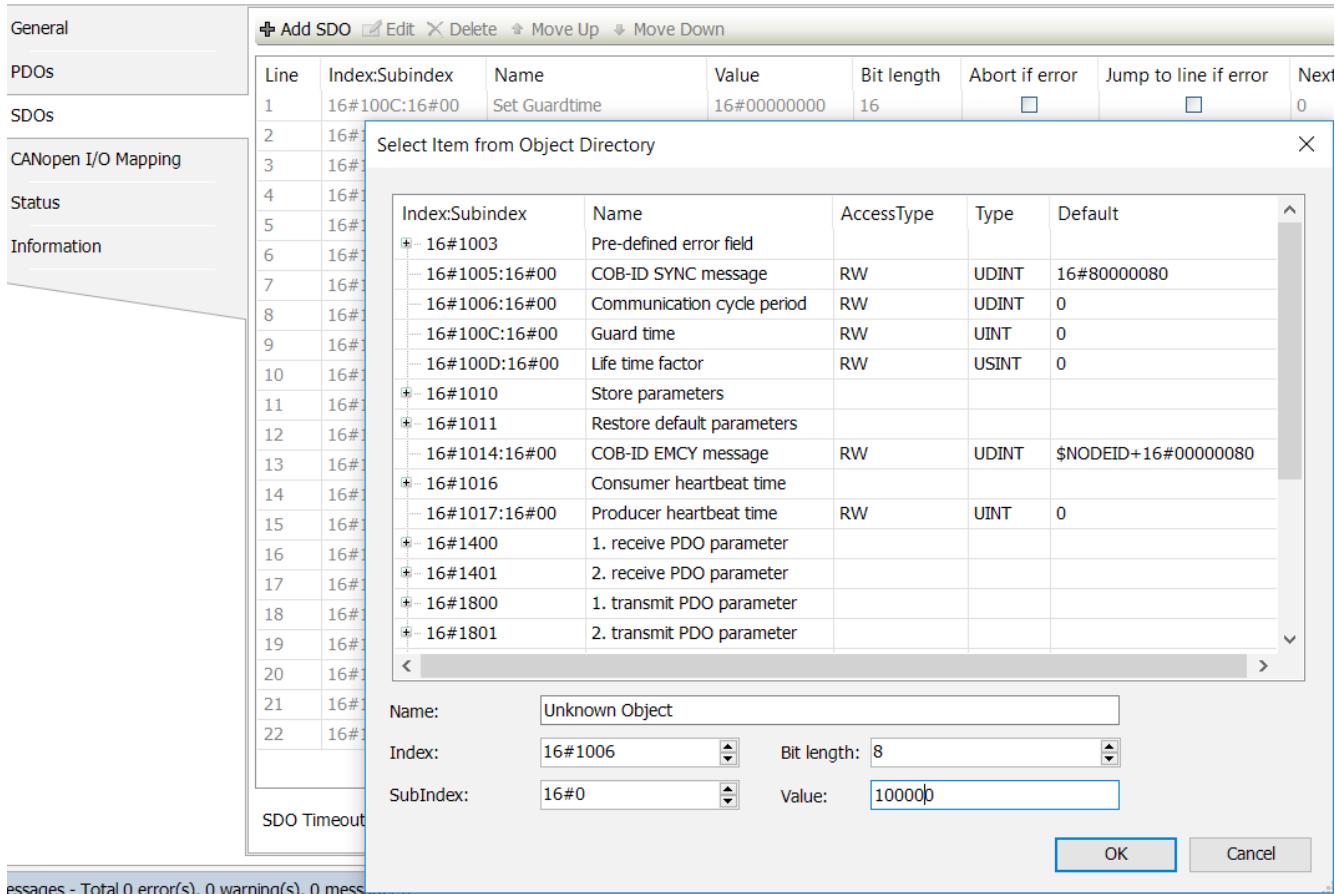

**General**

Node ID:	1	SDO Channels (1/1 active)	<b>CANopen</b>
<input checked="" type="checkbox"/> Enable Expert Settings	<input type="checkbox"/> Optional Device		
<input type="checkbox"/> Enable Sync Producing	<input type="checkbox"/> No Initialisation	<input type="checkbox"/> Reset Node:	Sub:001
<b>Nodeguarding</b>		<b>TIME</b>	
<input type="checkbox"/> Enable Nodeguarding	<input checked="" type="checkbox"/> Enable Heartbeat Producing	<input type="checkbox"/> Enable TIME Producing	
Guard Time (ms): 0	Producer Time (ms): 200	COB-ID (Hex): 16# 100	
Life Time Factor: 0	<b>Heartbeat Consuming (1/1 active)</b>	<input type="checkbox"/> Enable TIME Consuming	
<b>Emergency</b>		<b>Checks at Startup</b>	
<input checked="" type="checkbox"/> Enable Emergency	COB-ID: \$NODEID+16#80	<input checked="" type="checkbox"/> Check Vendor ID	<input type="checkbox"/> Check Product Number
		<input type="checkbox"/> Check Revision Number	

## 7.2.2 SyncMonitoring

To activate the device-internal monitoring of the Sync cycle, the monitoring time has to be written into the object directory entry 0x1006. This is possible by supplementing the SDO list in the CANopen configurator or during the operating time via the function block COP\_SDOwrite.

The monitoring time is indicated in microseconds [ $\mu$ s].

Messages - Total 0 error(s). 0 warning(s). 0 messages(s).

## 7.3 Electronic Data Sheet

The EDS contains the description of all parameters and I/O data of the device in a format defined by CANopen. The EDS files are provided for all CANopen slaves by ifm electronic.

The EDS files are available at [www.ifm.com](http://www.ifm.com).

## 8 Parameter setting

### 8.1 Automatic saving

Automatic saving of the communication and device parameters can be activated or deactivated by means of the “save parameter” entry (object directory, index 1010, S-Idx 01).

- Value 0x00:

There is no automatic saving. Changed parameters are only valid until the device is switched off or until the next reset.

- Value 0x01:

Changed parameters will be saved if the string “save” is written in S-Idx 01. Otherwise changed parameters are only valid until the device is switched off or until the next reset.

- Value 0x02:

Changed parameters are saved automatically.

### 8.2 Restoring the factory setting

With the function “restore” (object directory, index 1011, subindex 01) the factory default values can be restored (except for the baud rate and the node ID). They become valid with the next power on.

### 8.3 Communication profiles; Idx 1000 to 1FFF

Parameters	Index in object directory	Default value (factory preset)	Change saved automatically	Change effective
COB ID Synch Object	1005 00	0x80	adjustable	after PreOp
Communication Cycle	1006 00	0x00 (Off)	adjustable	immediately
Guard Time	100C 00	0x00 (Off)	adjustable	immediately
Life Time Factor	100D 00	0x00	adjustable	immediately
Save Parameter	1010 01	0x02 (AutoSave ON)	yes	immediately
COB-ID EMCY	1014 00	0x80 + node ID	adjustable	after a reset
Consumer Heartbeat Time	1016 01	0x00 (Off)	adjustable	immediately
Producer Heartbeat Time	1017 00	0x00 (Off)	adjustable	immediately
COB-ID Rx PDO 1	1400 01	0x200 + node ID	adjustable	after PreOp
Trans Type Rx PDO 1	1400 02	0x01 (synchronous)	adjustable	immediately
COB-ID Rx PDO 2	1401 01	0x300 + node ID	adjustable	after PreOp
Trans Type Rx PDO 2	1401 02	0x01 (synchronous)	adjustable	immediately
COB-ID Tx PDO 1	1800 01	0x180 + node ID	adjustable	after PreOp
Trans Type Tx PDO 1	1800 02	0xFF (asynchronous)	adjustable	immediately
Inhibit Timer Tx PDO 1	1800 03	0x0000	adjustable	immediately

Parameters	Index in object directory	Default value (factory preset)	Change saved automatically	Change effective
Event Timer Tx PDO 1	1800 05	0x00	adjustable	immediately
COB-ID Tx PDO 2	1801 01	0x280 + node ID	adjustable	after PreOp
Trans Type Tx PDO 2	1801 02	0x01 (synchronous)	adjustable	immediately
Inhibit Timer Tx PDO 2	1801 03	0x0000	adjustable	immediately
Event Timer Tx PDO 2	1801 05	0x00	adjustable	immediately

The life time factor 0 is interpreted as 1. The first guard protocol is interpreted as "start guarding" even if guarding is not yet active at that time (guard time = 0).

## 8.4 Manufacturer-specific profiles; Idx 2000 to 5FFF

Parameters	Index in object directory	Default value (factory preset)	Change saved automatically	Change effective
I/O configuration	2000	binary: 12 IN / 16 OUT analogue:: 4 IN (0...10V)	adjustable	after PreOp
PWM frequency	2001	0x64 (100 Hz)	adjustable	after PreOp
Node-ID *)	20F0, 20F1	0x20 (0d32)	yes	after a reset
Baud rate *)	20F2, 20F3	0x04 (125 Kbit/s)	yes	after a reset
Autostart	20F4	0x00 (off)	adjustable	immediately

\*) Observe rotary switch position!

Entries in the object directory indexes 20F0/20F1 and/or 20F2/20F3 are only valid if the rotary switches for baud rate and/or node ID are in the position "F".

(Position and coding of the rotary switches → 9 Technical data)

Explanation of the abbreviations:

0x... = hexadecimal value  
0d... = decimal value

str = string  
rw = read-write  
ro = read only  
u8 = unsigned 8 bits  
u16 = unsigned 16 bits

## 8.5 EMCY objects

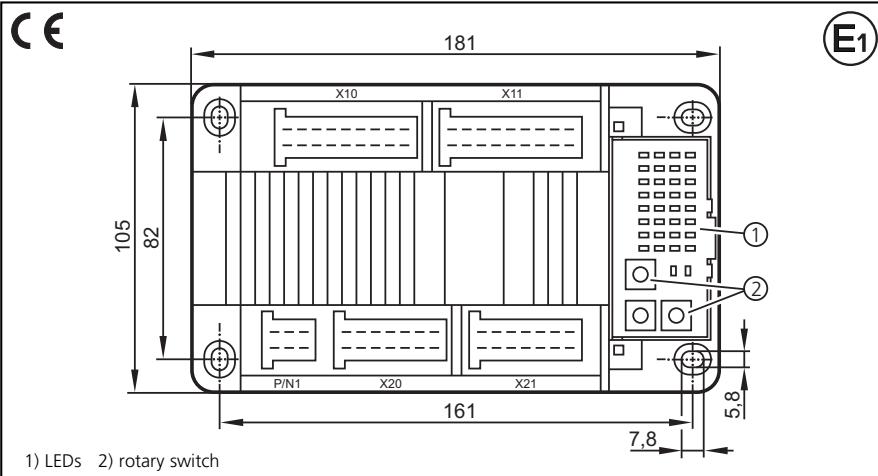

The following error codes are supported according to DSP-301 and DSP-401:

<b>EMCY Code</b>	<b>Error Reg</b>	<b>Zusatz Code</b>	<b>Beschreibung</b>
0x2110	0x03	bit-coded	"Device Specific" 0001 analogue input 1 excessive current 0010 analogue input 2 excessive current 0100 analogue input 3 excessive current 1000 analogue input 4 excessive current
0x3300	0x05	0x00	"Output Voltage" Supply voltage VBBO of the outputs is missing.
0x8000	0x11	0x00	"Monitoring" (Synch Error) For "communication cycle" no synch object is received; (only in OPERATIONAL). Reset with the next synch OBJ or PREOP.
0x8100	0x11	0x00	"Communication" (CAN error warning) Internal CAN error counter has exceeded the error warning level.
0x8110	0x11	0x00	"Communication" (CAN overflow) Overflow of an Rx queue; e.g. frequency of the Rx PDOs too high.
0x8111	0x11	0x00	"Communication" (CAN overflow) Overflow of a Tx queue; e.g. device does not communicate with the bus.
0x8120	0x11	0x00	"Communication" (CAN error passive) CAN controller has passed into the CAN error passive state.
0x8130	0x11	0x00	"Monitoring" (guarding error/heartbeat error) For "guard time" x "life time factor" no guard object is received or heartbeat object outside the expected time. Reset with the next communication.
0xFF00	0x81	bit-coded 3)	"Device Specific" 0x 0000 0001 output 1 short circuit 1) ... ... " 0x 0000 8000 output 16 short circuit 1) 0x 0001 0000 output 1 wire break 2) ... ... " 0x 8000 0000 output 16 wire break 2) 1) short circuit only if outputs in the ON state 2) wire break only if outputs in the OFF state 3) here indicated as hex value

## 9 Technical data

### CR2016

CabinetModule  
I/O module  
digital and analogue  
for R 360 system  
32 inputs/outputs  
CANopen interface  
10...32 V DC

UK

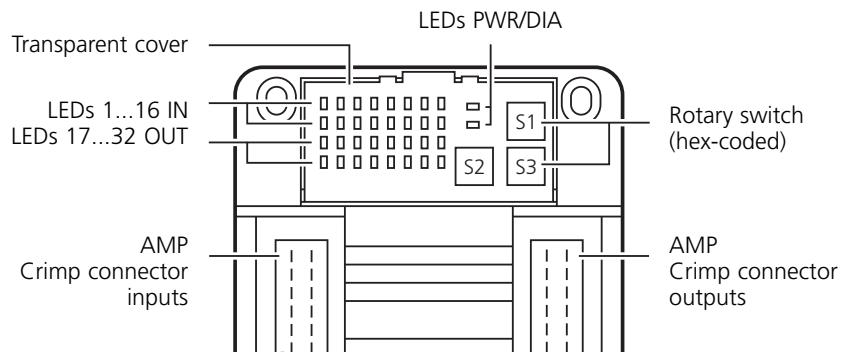

#### Technical data

#### 16 inputs (12 digital / 4 analogue) 16 outputs (12 digital / 4 digital or PWM)

Housing	plastic housing (black) with transparent hinged cover for operating elements and indicators
Dimensions (HxWxD)	181 x 105 x 30 mm
Mounting	fixing by means of 4 M4 screws to DIN 912 or DIN 7984 and 4 tubular rivets to DIN 7340 (tubular rivets are enclosed)
Connections	AMP crimp connector, to be clipped into place and thus vibration-resistant, protected against reverse polarity (AMP junior timer contacts) 2 x 18 pins, 2 x 14 pins 1 x 6 pins
Weight	0.38 g
<b>Inputs</b>	16
can be configured	8 digital, positive switching (high side), including 4 frequency inputs up to 2 kHz 4 digital positive/negative switching (high/low side) 4 analogue, 0...10/32 V, 0/4...20 mA, ratiometric or digital positive switching
sensor supply $I_{max}$	1000 mA
<b>Outputs</b>	16
can be configured	4 digital, positive switching, diagnostic capability or PWM channel (variable frequency) 12 digital, positive switching, diagnostic capability or PWM channel (fixed frequency)
switching current per output	0,1...2 A (operating temperature > 75 °C = max. 1.5 A)
total current	max 16 A/group
Operating voltage $U_B$	10...32 V DC
Nominal voltage	12/24 V DC
Reverse polarity/short-circuit protection	yes
Current consumption	$\leq 125$ mA (without external load at 24 V DC)
Operating/storage temperature	-40...85 °C
Protection	IP 20
Interface	CAN interface 2.0 B, ISO 11898
Controller	16 bits Fujitsu MB90F543
Baud rate	20 Kbits/s...1 Mbit/s (default setting 125 Kbits/s) (adjustable via rotary switches or CANopen object directory)
Communication profile	CANopen, CiA DS 301 version 4.02, CiA DS 401 version 2.1
Programming system	from CODESYS 2.3 via EDS
Node ID (default)	hex 20 (= dec 32) (adjustable via 2 rotary switches or CANopen object directory)
Displays	1 LED green (PWR) 1 LED red (diagnosis, DIA) 32 LEDs yellow (status of the inputs / outputs)

**CR2016****Technical data**

(view from the top on the pin side)

Explanation of the abbreviations:

A = analogue  
BH = binary (high side)  
BL = binary (low side)

FRQ/CYL = frequency inputs  
IL = pulse (low side)  
PH = PWM (high side)

PWM = pulse-width modulated signals  
VBB<sub>S</sub> = supply module/sensors  
VBB<sub>O</sub> = supply outputs

## 10 Maintenance, repair and disposal

As the module does not contain any components which must be maintained by the user, the housing must not be opened.

The maintenance of the module may only be carried out by the manufacturer.

The disposal must be carried out according to the corresponding national environmental regulations.

## 11 Declaration of conformity

For test standards and regulations → 9 Technical data.

The CE Declaration of Conformity and the E1-approval are available at:  
[www.ifm.com](http://www.ifm.com).

	1	binary inputs	ro	u8	-	bits 0...7: binary inputs 1....8
	2	binary inputs	ro	u8	-	bits 0...3: binary inputs 9...12 bits 4...7: analogue inputs 1...4 ,if configured as binary input"
6200	0	number of binary outputs (8bit)	ro	u8	0x02	
	1	binary outputs	wo	u8	0x00	bits 0...7: binary outputs 1...8
	2	binary outputs	wo	u8	0x00	bits 0...7: binary outputs 9...16
6404	0	number of analogue inputs (ifm specific)	ro	u8	0x04	
	1	analogue input 1	ro	u16	-	depends on IO configuration
	2	analogue input 2	ro	u16	-	depends on IO configuration
	3	analogue input 3	ro	u16	-	depends on IO configuration
	4	analogue input 4	ro	u16	-	depends on IO configuration
6414	0	number of analogue outputs (ifm specific)	ro	u8	0x10	
	1	analogue output 1	wo	u16	0x0000	0...1000 per mille
	2	analogue output 2	wo	u16	0x0000	0...1000 per mille
	3	analogue output 3	wo	u16	0x0000	0...1000 per mille
	4	analogue output 4	wo	u16	0x0000	0...1000 per mille

Index	S-Idx	Name	Typ		Default	Beschreibung
	5	analogue output 5	wo	u8	0x00	0..10 per 10%
	6	analogue output 6	wo	u8	0x00	0..10 per 10%
	7	analogue output 7	wo	u8	0x00	0..10 per 10%
	8	analogue output 8	wo	u8	0x00	0..10 per 10%
	9	analogue output 9	wo	u8	0x00	0..10 per 10%
	A	analogue output 10	wo	u8	0x00	0..10 per 10%
	B	analogue output 11	wo	u8	0x00	0..10 per 10%
	C	analogue output 12	wo	u8	0x00	0..10 per 10%
	D	analogue output 13	wo	u8	0x00	0..10 per 10%
	E	analogue output 14	wo	u8	0x00	0..10 per 10%
	F	analogue output 15	wo	u8	0x00	0..10 per 10%
	10	analogue output 16	wo	u8	0x00	0..10 per 10%

The entries 20F0/20F1 and 20F2/20F3 must always contain identical values. The new entries are valid after a reset (switching the module off/on). Values outside the permissible ranges will be rejected.

Observe rotary switch position!

Entries under 20F0/20F1 and 20F2/20F3 are only valid if the rotary switches for baud rate and/or node ID are in the position "F".
