

Retro-Reflex Sensor

P1PL102

Part Number

- Also suitable for glossy and reflective objects
- Condition monitoring
- High switching frequency
- IO-Link 1.1
- No blind spot from single-lens optics

The retro-reflex sensor works with red light and a reflector. It also reliably detects objects with reflective or glossy surfaces at high speeds. Thanks to its great range, the sensor can, for example, be used to manage feed and presence controls as well as to detect objects on wide feed belts. The IO-Link interface can be used to configure retro-reflective barriers (PNP/NPN, NC/NO, switching distance), as well as for reading out switching statuses and signal values.
